

The Small Item with a Big Impact!

Very seldom a product comes along that benefits all that use it. Whether you are a drywall and framing contractor, builder, home owner, or supplier, all are Winners With The Nailer.®

Drywall clips that pinch on to the drywall are awkward to use and make trimming difficult.

All too often these clips cause serious injury with their sharp edges. The Nailer is the simple way to eliminate these issues and many more...

Material Savings: Eliminating the extra wood backing on the top plates and vertical corners will substantially save on lumber costs. On hip roofs, order your jack trusses without the bottom cords.

Labor Savings: Reducing blocking time by up to a staggering 80%, and get even more savings because there is less wood to cut through for electrical and plumbing installation.

Minimize Call Backs: Placing the Nailer on the top plate to either side of the truss and then fastening the drywall to The Nailer in the corner allows the truss to arch and move without ripping out the corner joint from the wall. No more cracks!

Energy Savings: Full friction insulation batts can be properly placed without compromise, eliminating corner freezing and cracking.

Green Product: Whether your Nailer choice is plastic or galvanized steel, you are saving our natural resources and conserving our environment. Five (5) Nailers replace one (1) stud used for backing.

THE NAILER®

Better Than A Stud!

The Drywall Fastener for Supporting Interior Drywall Corners and more.

The only patented drywall fastener that hard fastens to both the drywall and the framing.

The Nailer Makes Everyone a Winner

Framing and Drywall Contractors:

Two skilled carpenters normally take two days to block 2,000 square feet of new building. With The Nailer that phase is completed by one laborer in only three hours.

Because The Nailer hard fastens to both the stud and the drywall, it makes corner trimming and fitting less time consuming while making taping easier, giving you much smoother corners.

The Nailer gives you a competitive edge that can greatly improve your job capture rate. Less lumber, less labor and virtually no call backs go right to your bottom line.

Home Builders:

The Nailer is the little item with the big impact that dramatically improves the profitability of every house you build. The savings in lumber and labor is up to \$1,200 per each 2,000 square feet of house built.

The Nailer also improves customer relations because call backs due to truss uplift and cracking drywall are dramatically reduced, especially in areas of shifting soil. Your houses will be more energy efficient, and when you use our 100% recycled plastic model, you will meet new Green Building requirements.

Electrical and plumbing sub contractors will be able to complete installations much easier and faster, saving you additional money.

Home Buyers:

Home buyers will enjoy purchasing a home that requires less maintenance and will be more energy efficient. For those that recognize the importance of a Green Built Home, they will know they are helping in a small way to save on natural resources and improve our environment.

Suppliers and Distributors:

Offer your contractors the opportunity to be more competitive. The Nailer is available in two versions.

The original Nailer is made of 100% recycled plastic and The Mighty Nailer® is galvanized steel. Both easily install on 16" centers with screws, staples or nails and can be ordered in quantities from 200 to pallet orders.

Visit our web site for a free demo or call today to speak with one of our representatives. Ask your supplier to carry The Nailer. We know it will become a standard in your tool belt.
